# The challenges of the policy context

## GOAL 2

End hunger, achieve food security and improved nutrition and promote sustainable agriculture

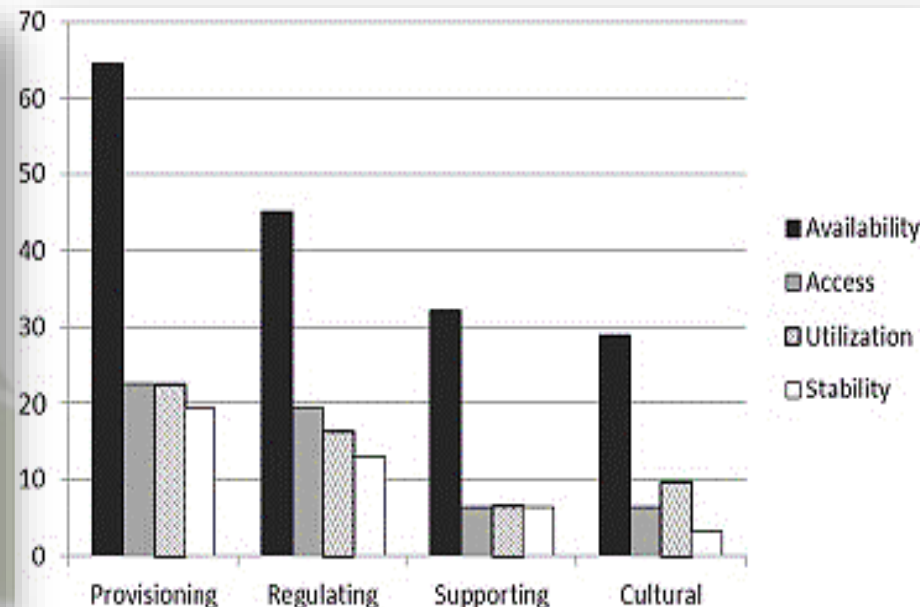

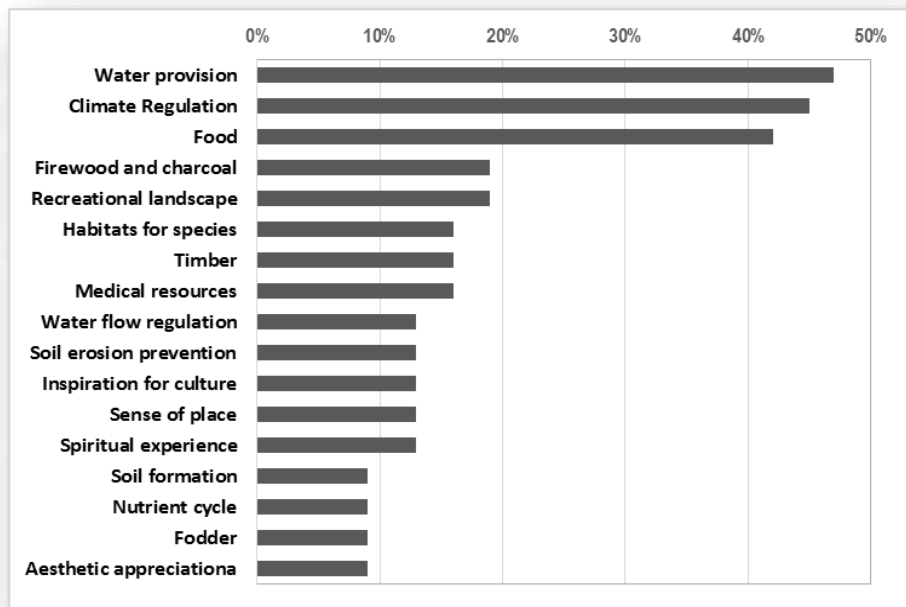

- Production and productivity.
- Income.
- Genetic diversity.
- Resilience and adaptation.

- Poor people
- Vulnerable groups: infants, elderly, women.
- Family farmers, pastoralists and fishers.

1. **Need greater understanding of human – nature relations affecting food security in its multiple dimensions.**
2. **Need to integrate views from the ground so that ES-based recommendations are implemented.**

# ES and food security

Cruz-Garcia, Sachet, Vanegasa & Piispanena (2016)

Let's try with two words

COFFEE

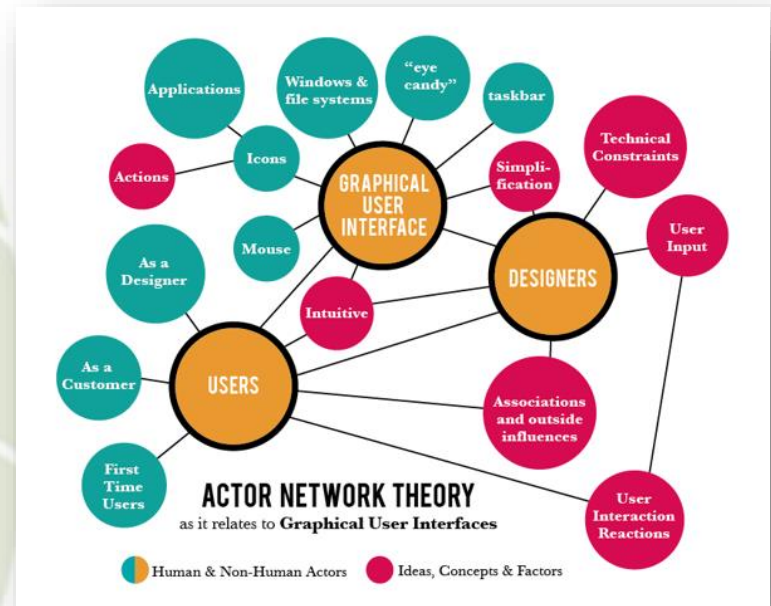

TUNA

# Actor-Network Theory

- Sociology of science and technology Callon (1986), Latour (2005)
- It rejects traditional dualisms between natural and social orders, science or culture, and between human and non-humans.
- Practices emerge from a collective agency developed through 'networks' of people, artefacts, animals, plants, and texts.
- Connections between human actors and non-human entities imply acts of translation, giving these entities meaning, identity, interest, roles, and projects.
- Accepted narratives represent a stable network that successfully accommodated one or more acts of translation.

# ES, food security, and ANT

- ▣ Views on nature's role in food security are not unlikely to be based solely on the amount of food obtained from natural sources.
- ▣ **OBJECTIVE:** to disentangle the diversity of human – nature 'meaningful' relations shaping local narratives of food (security).

# Our study areas: Malawi, Peru and Colombia

# Our study sites

Socio-economic characteristics	COLOMBIA (11 villages)	PERU (9 villages)	MALAWI (6 villages)
Poverty (official)	54%	38%	64%
Stunting (survey)	29%	18%	27%
Self-class. as food insecure (survey)	47%	72%	62%
Livelihood Strategies	<b>Subsistence:</b> <ul style="list-style-type: none"> <li>▪ Fishing</li> <li>▪ Hunting</li> <li>▪ Slash-and-burn agriculture</li> <li>▪ Foraging</li> </ul>	<b>Mixed:</b> <ul style="list-style-type: none"> <li>▪ Fishing</li> <li>▪ Slash-and-burn agriculture</li> <li>▪ Commercial agr.</li> <li>▪ Timber extraction</li> <li>▪ Foraging</li> <li>▪ Casual jobs</li> </ul>	<b>Mixed:</b> <ul style="list-style-type: none"> <li>▪ Fishing (seasonal)</li> <li>▪ Agriculture: commercial and self-consumption.</li> <li>▪ Foraging (seasonal)</li> <li>▪ Casual jobs</li> </ul>

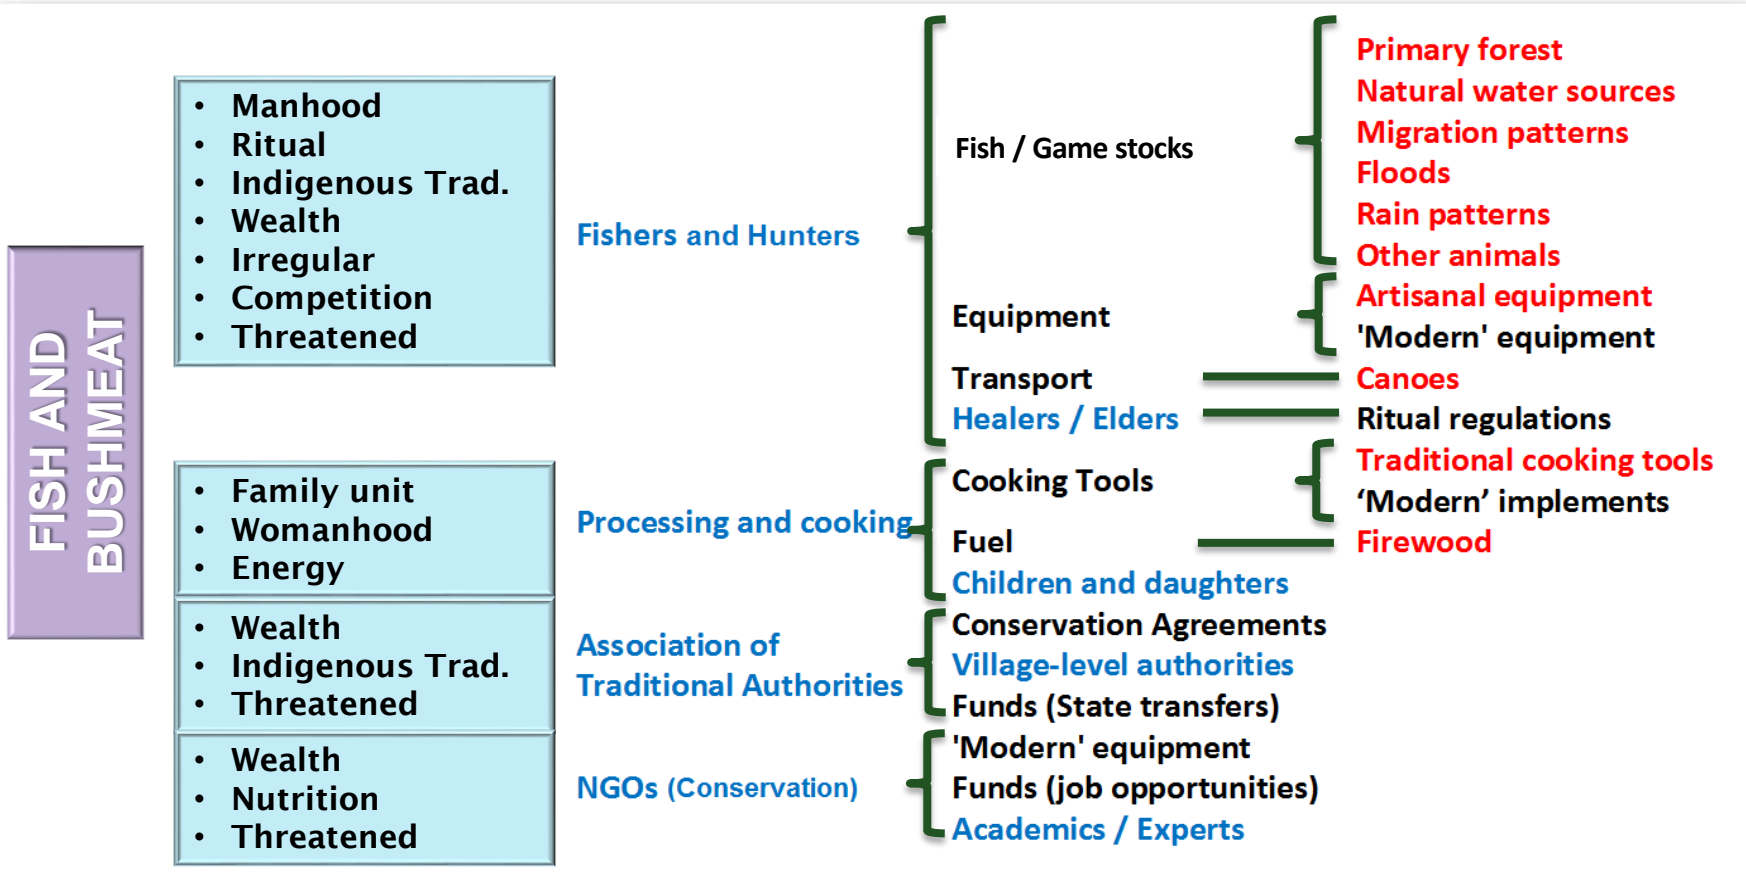

# Methods

- Participatory exercises on diets and food sources (Colombia: 7; Peru: 6; Malawi: 6).
- Separate focus group discussions on food security - availability, access, regularity and quality - with men and women (Colombia: 14; Peru: 12; Malawi 12).
- Average number of group members: 5.
- Qualitative thematic analysis.

# Fish and Bush-meat

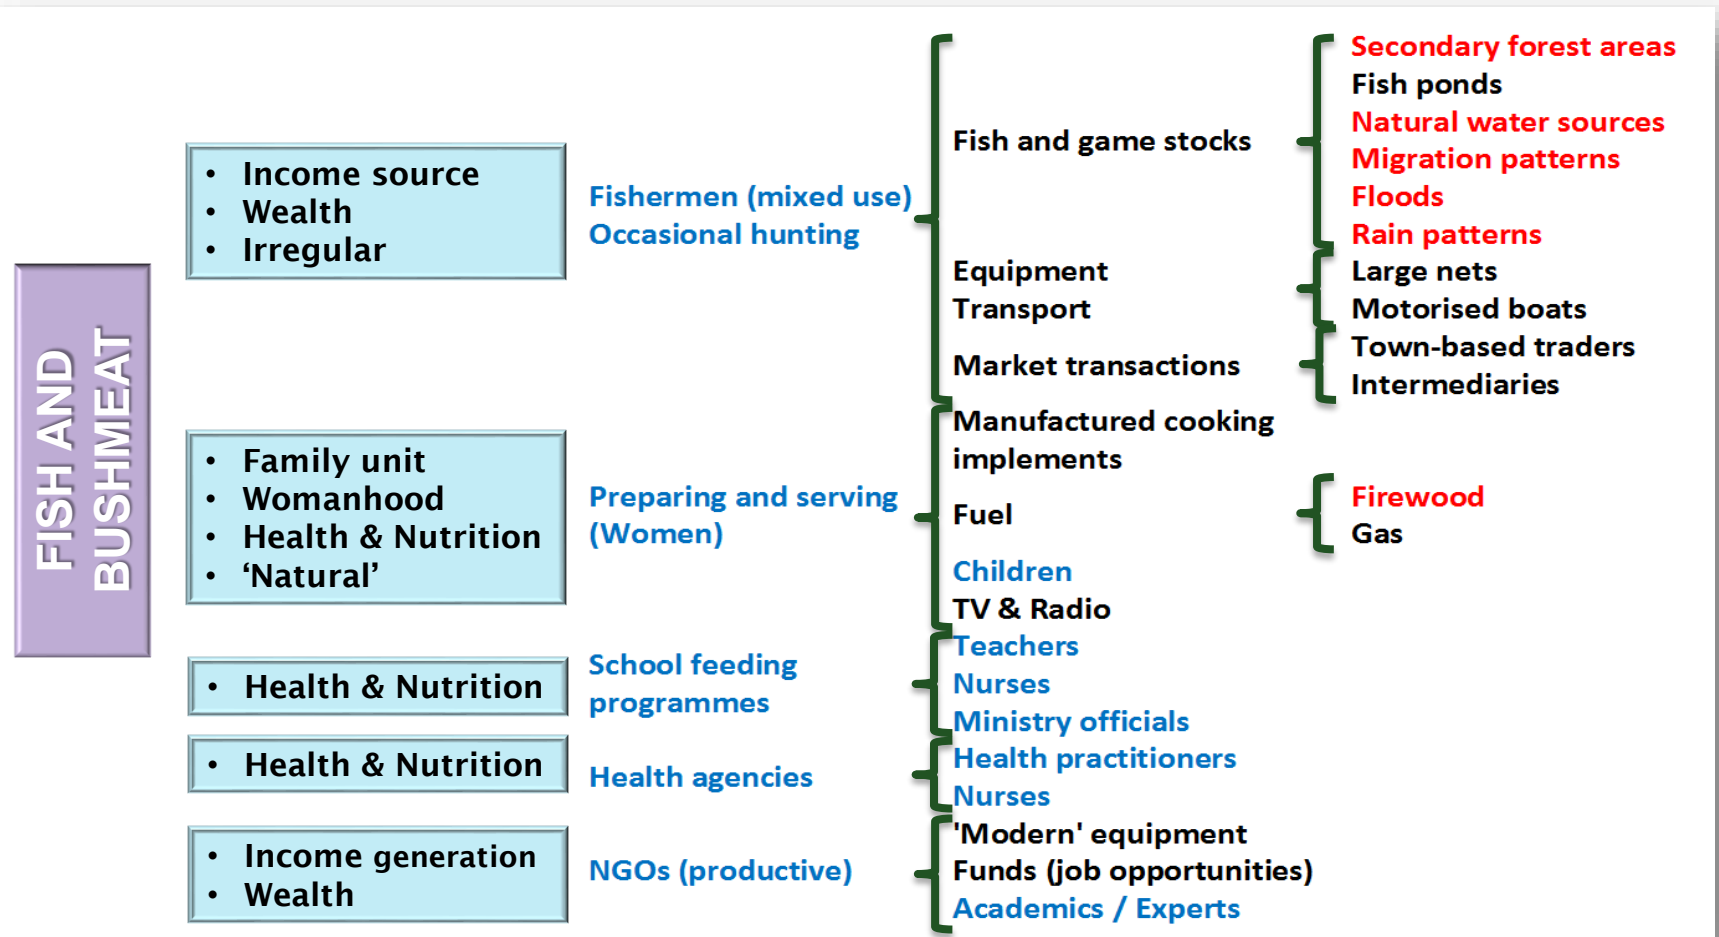

## COLOMBIA (SUBSISTENCE)

# Fish and Bush-meat

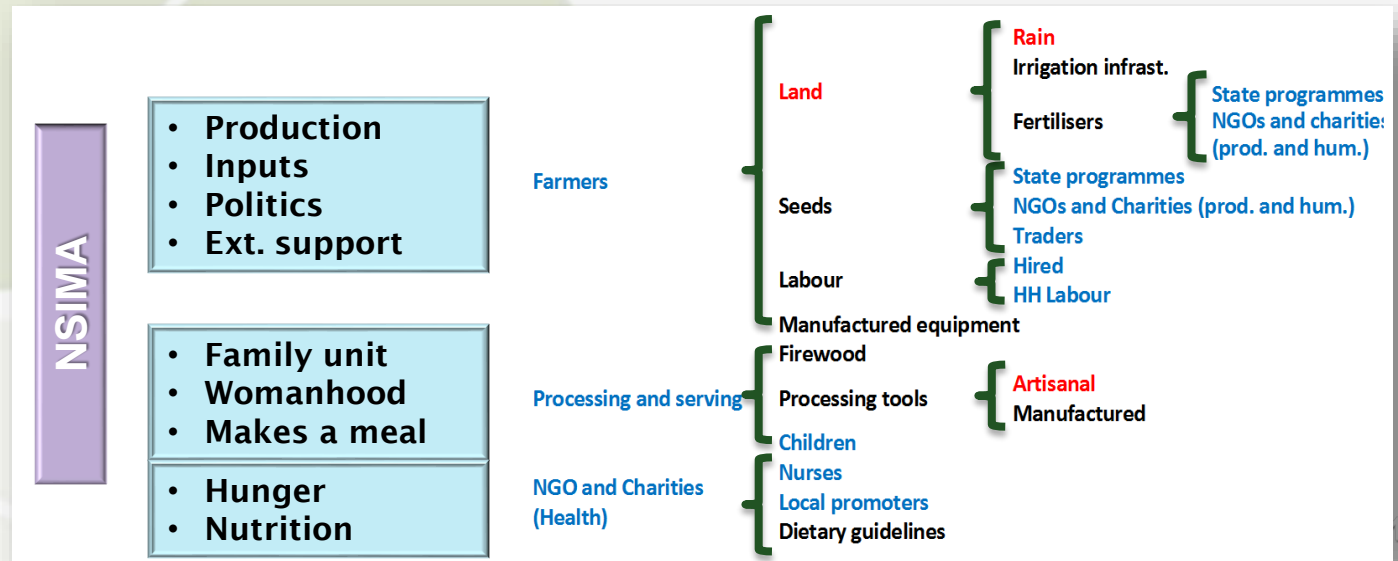

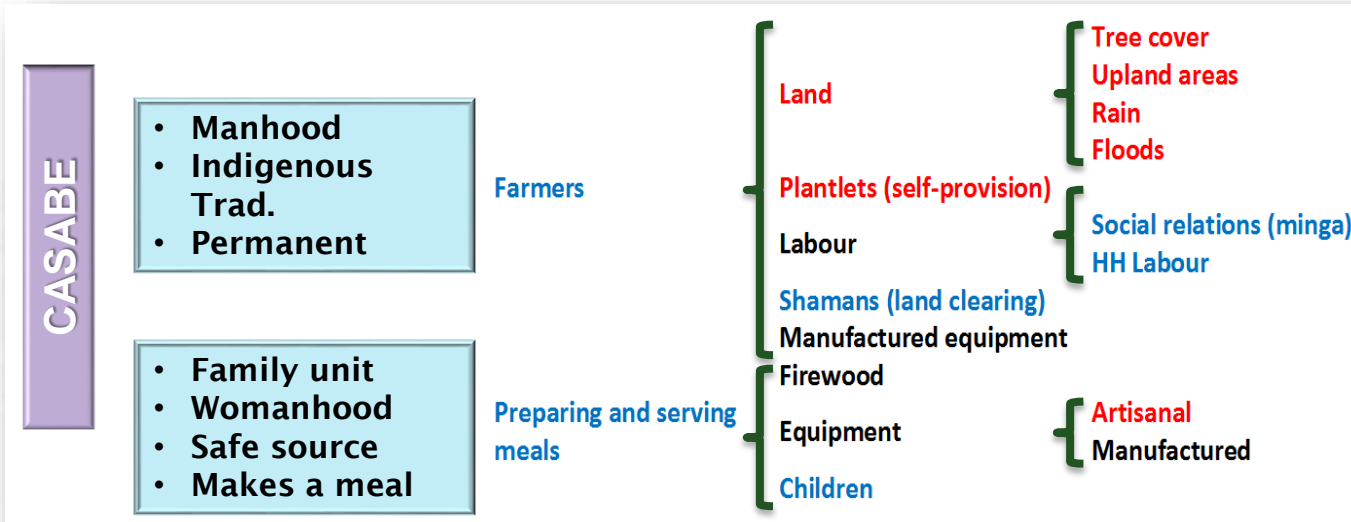

## PERU (MIXED)

# Staple foods: Colombia (Casabe) and Malawi (Nsima)

# So what?

- It avoids essentialist or generalised interpretations of local perspectives.
- It shows how local views of nature are constructed progressively, so that we can identify what 'nature' means to people in practical terms.
- It may help to overcome the provisioning / cultural division.
- It facilitates inserting external actors into the network of translations shaping a particular debate.

# THANK YOU
